Skim milk is a highly nitrogenous food. With grain as a supplement it makes a balanced ration. The fullest value of skim milk is obtained only when it is used as a stock feed. It is adaptable to that end, since it contains a large proportion of the needful elements required for cheap and rapid development of growing livestock and poultry. Feeding skim milk is rather an involved process of making money. It is not a flashy method. Feeding operations extend over a long period and the gradual cumulative value of skim milk thus used is overlooked. Yet a plan of dairy farming that has skim milk as its cornerstone is the...
