KNOCKOUT MOUSE

Alphascript Publishing Dez 2009, 2009. Taschenbuch. Book Condition: Neu. 220x152x18 mm. Neuware - High Quality Content by WIKIPEDIA articles! A knockout mouse is a genetically engineered mouse in which one or more genes have been turned off through a gene knockout. Knockout mice are important animal models for studying the role of genes which have been sequenced, but have unknown functions. By causing a specific gene to be inactive in the mouse, and observing any differences from normal behaviour or condition, researchers can infer its probable function. Mice are currently the most closely related laboratory animal species to humans for which the knockout technique can easily be applied. They are widely used in knockout experiments, especially those investigating genetic questions that relate to human physiology. Gene knockout in rats is much harder[citation needed] and has only been possible since 2003. The first knockout mouse was created by Mario R. Capecchi, Martin Evans and Oliver Smithies in 1989, for which they were awarded the Nobel Prize for Medicine in 2007. Aspects of the technology for generating Knockout mice, and the mice themselves have been patented in many countries by private companies. 136 pp. Englisch.
