Not illustrated. 1909 Excerpt: .plant, as now existing, more than 650,000,000 tons of coal, or 50 , in excess of the total coal production of the country in 1906. At an average price of \$3.00 per ton it would require the consumption of coal costing \$2,000,000,000 to produce an equivalent power in steam plants of the present general type. The supply of water power is limited, however, when the rapid rate of increase in our power requirements is considered, and great care, therefore, must be exercised to insure the preservation of our water power resources and to secure the maximum practicable development. Water Powers of the Upper Mississippi and Tributaries, and Water Powers of the Southern Appalachian System, by M. O. Leighton, Chief Hydrographer, U. S. Geological Survey. t Computed by F. G. Moorhead, in The World s Work, April 1908, p. Total power used in United States. Using the...

Reviews

A brand new e book with a new perspective. I could comprehend every little thing using this written e publication. I am quickly will get a satisfaction of reading through a written ebook.

-- **Clemmie Rolfson**

This pdf is definitely not easy to get started on studying but quite entertaining to read through. I am quite late in start reading this one, but better then never. Once you begin to read the book, it is extremely difficult to leave it before concluding.
