Brand New Book ***** Print on Demand *****.Approximately 23.3 million operations were performed in 1989 in the United States, and most of these involved some form of pain management. Unfortunately, clinical surveys continue to indicate that routine orders for intramuscular injections of opioid as needed -the standard practice in many clinical settings-fail to relieve pain in about half of postoperative patients. Postoperative pain contributes to patient discomfort, longer recovery periods, and greater use of scarce health care resources and may compromise patient outcomes. There is wide variation in the methods used to manage postoperative and other acute pain, ranging from no set strategy to a comprehensive team approach as advocated in this clinical practice guideline. This guideline sets forth procedures to minimize the incidence and severity of acute pain after surgical and medical procedures and pain associated with trauma in adults and children. It offers clinicians a coherent yet flexible approach to pain assessment and management for use in daily practice. Although it is not practical or desirable to eliminate all postoperative and other acute pain, an aggressive approach to pain...
